News and Application Guide

Volume EK.45

2006: The Year of the DuraFon!

A review of some markets that the DuraFon will excel in this year.

DuraFon 1X Applications

Farms: Have telephone and 2-way communication without a monthly airtime or service fee. With just 1 -3 users and one phone line we recommend checking out the *DuraFon 1X* system.

Self-Storage: Show and maintain units without missing calls. The long range of the *DuraFon 1X* can cover large facilities and bring telephone and 2-way radio right to your fingertips.

Equipment Rental: The *DuraFon 1X* lets store personnel assist customers without missing calls.

DuraFon 4X Applications

The longest range and most durable cordless available.

Manufacturing: Floor managers and supervisors in large manufacturing facilities can make and receive calls without having to return to their office with Long Range *DuraFon 4X* system.

Warehousing: The 2-way radio intercom and broadcast features on the *DuraFon 4X* can cover large warehouses up to 250,000 sq. ft., with telephone capability too!

Auto Dealers: Sales reps and service advisors can make and receive telephone and 2-way radio calls from the showroom or the lot all with the *DuraFon 4X*.

Retailers: Durable and easy-to-use makes the *DuraFon 4X* an exceptional choice for retailers with any size store. Departments can be on the floor stocking or assisting customers and still be able to provide quick service to a caller.

2-Way Radio and Broadcast features are independent of the base unit.

EnGenius handsets can call each other for a full duplex 2-Way radio conversation and also send loud intercom/page broadcasts (1 to 1, 1 to group, or 1 to all).

Handset-to-handset features are independent of the base unit, so they don't tie up a line, and will work off-site or in the event of a power outage (great for emergencies, field trips, sporting events, etc.)
