

CONCEPT 4000

WITH CONCEPT,
YOU'RE PROTECTED

CONCEPT 4000

WITH CONCEPT, YOU'RE PROTECTED

RISK

It doesn't matter if your business is big or small. Burglary, vandalism and internal theft represent very real risks to your enterprise. Your key business assets - people, premises, stock and equipment - are endangered. Your electronic assets - customer records, intellectual property and financial data - are also at risk. These threats can represent potential downtime, financial loss and even catastrophic business failure. Inner Range delivers security and access control real time solutions that are *field proven* in minimising and controlling risk for continuing enterprise.

PEACE OF MIND

An Inner Range Concept 4000 Security System will protect your valuable business assets. Imagine an intruder sets foot on your property to steal equipment, vandalise property or ransack your premises. Concept can sound an alarm, call a monitoring centre to despatch security guards and notify you with an SMS text message - all in a heartbeat. Meanwhile, digital video cameras automatically orient on the source of the disturbance and capture every detail of the incursion, allowing you to establish exactly what happened and verify that your assets are secure.

Now, imagine that scenario without Concept 4000. You're at the mercy of thieves, burglars and criminals. For peace of mind, ensure that your business assets - people, premises, equipment and stock - are protected by Inner Range.

With your premises secured by Concept 4000, you can look forward to a work force that feels protected - 24 hours a day, 7 days a week, 365 days a year.

MORE THAN INTRUDER DETECTION

Concept 4000 is more than an intruder detection system. Leveraging 20 years of integration experience, Concept 4000 can control lighting, air conditioning, plant equipment and more.

Concept 4000 makes it easy. Just present an authorised card and it can do the rest - turn off lights and air conditioning, ensure that windows and doors are sealed, arm the intruder detection system and notify a monitoring centre that your premises are unattended.

SAVE MONEY

Installing a Concept system saves you money now and in the future. Here are just a few examples of how:

- Concept 4000 protects your critical assets from burglary, vandalism and internal theft
- Installing a world-class real time intrusion detection system can reduce insurance premiums
- Concept 4000 can monitor equipment and warn of impending failures before they occur
- Concept 4000 can integrate with your payroll system to provide electronic records of staff working hours and ensure accurate reporting and payment of staff wages

MULTIPLE TENANTS, ONE SYSTEM

If you're running a retail or residential complex large or small, Concept 4000 is the security and access control system with the best feature set at an affordable price-point. You can have up to 99 individual tenants, each with their own keypad and/or card readers, using only one Concept 4000 Control Panel.

WHY CHOOSE CONCEPT

For the past ten years, Concept 4000 has been the leading integrated security and access control product on the market.

Concept 4000 is very cost effective. Our scalable architecture delivers a system that grows as you grow.

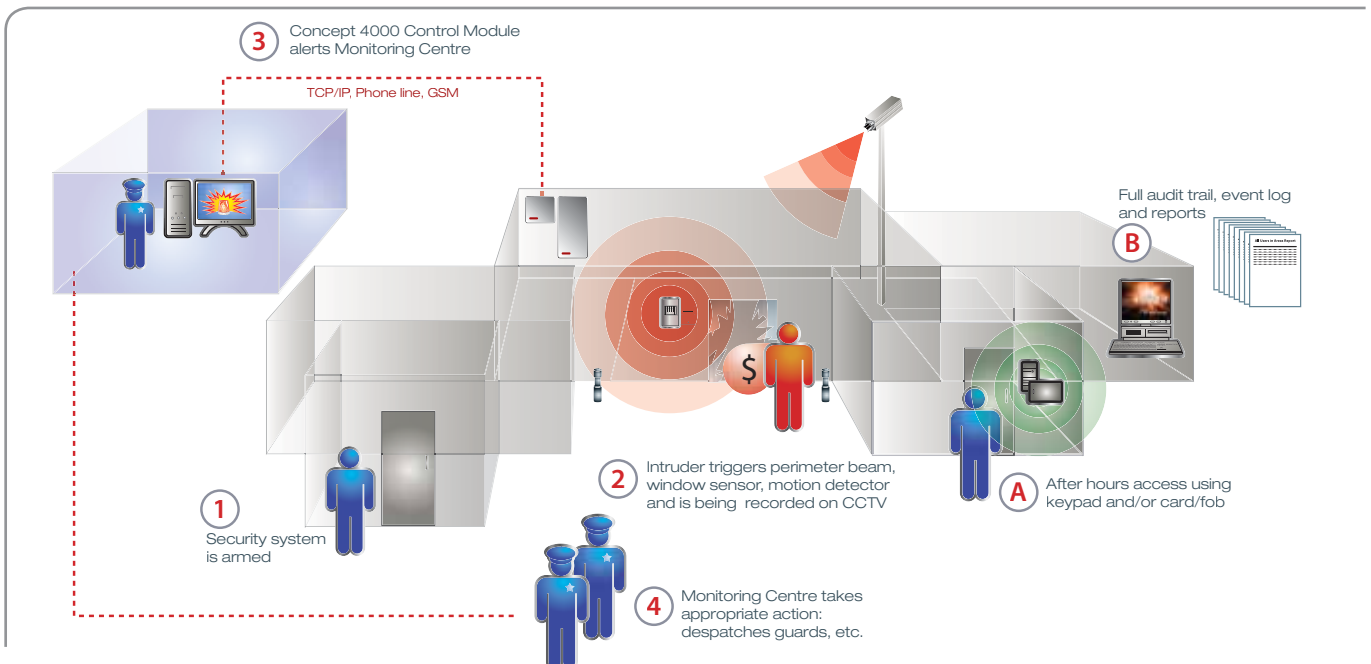

Concept 4000 is extremely versatile, without sacrificing ease of use. For example, our touchscreen offers outstanding power and simplicity in an attractive enclosure - none of our competitors can match it.

Concept 4000 is diamond tough. 128-bit encryption, multiple alarm reporting paths and high quality components ensures unrivalled security and peace of mind.

Concept 4000 integrates with the widest range of existing building systems. We can interface with nearly any system including heating, ventilation, air conditioning, lighting and more.

Our open sales channel and vast network of factory accredited installers means competitive quotes and system support are a phone call away, and you're never locked in to one supplier.

INTEGRATED INTRUDER DETECTION AND ACCESS CONTROL

INTEGRATED ACCESS CONTROL

Concept is a world-leading intruder alarm system, but that's only the beginning. With Concept 4000, you're also buying a fully featured enterprise access control solution. Control who goes where, and when. Arm your intruder detection system with the same card you use to open doors and ride elevators.

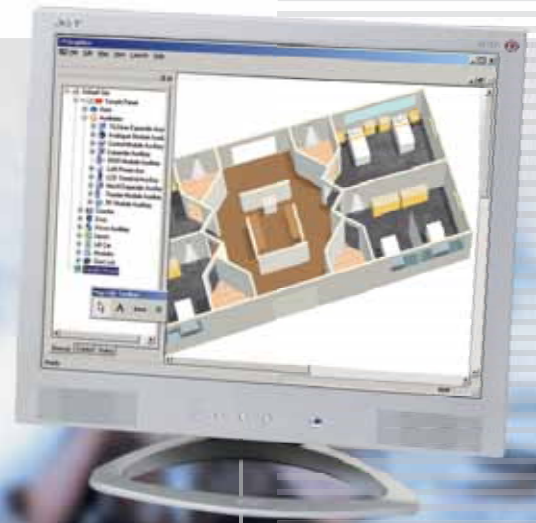

WHO GOES WHERE, AND WHEN

With Concept 4000, you dictate where staff and vehicles can and can't go in your facility. Areas can be secured depending on the time of day, day of week or other criteria such as the number of people already in the area. Do you have visitors on your site? No problem, you can issue temporary access tokens or require that visitors be escorted at all times.

KEYS ARE A THING OF THE PAST

Modern access control is here. With a Concept 4000 system, issuing cards or key fobs to new employees couldn't be easier, and suspending or revoking their access is just as simple. Temporarily elevate or reduce a user's privileges with the click of a button. Most importantly, Concept 4000 maintains a complete security log of everything that happens in your system - so YOU have the knowledge at your fingertips. Who opened this door, and when? Who suspended that card, and why? Who has access to this equipment? Press a button and get a report emailed to you or printed out in hard copy.

Attractive, intuitive touch screen interface for access, lighting and building automation control

Unrivalled integrated security and access control

Optional "Insight" software offers comprehensive system control and site management

The ideal security/access solution for:

- retail
- commercial
- industrial
- financial
- healthcare
- education

CONCEPT 4000

OUTSTANDING SUPPORT

At Inner Range, we recognise that making a great product is only the beginning, which is why we created the Inner Range Accredited Dealer Program. This program gives customers easy access to a choice of experienced and reputable companies for the installation and service of our products.

Where you require and receive support from one of our accredited dealers, you're getting service and support backed by the factory - another compelling reason to choose Concept 4000!

For a comprehensive list of accredited technicians visit <http://www.innerrange.com/HowToBuy.cfm>

INVEST IN THE FUTURE

When you buy Concept 4000, you're investing in the future. Concept 4000 can start small, then grow big. Very big. Our product has been deployed around the world in international airports, financial institutions, universities and to control lifts in 100+ floor apartment/business complexes.

When you install Concept 4000, you're choosing a system that grows as you grow - without equipment redundancy or wastage. Furthermore, you can depend on Inner Range to keep you at the sharp end of Security and Access Control technology - we've been at the forefront of innovative product design for over twenty years!

OPEN SALES CHANNEL

Many large vendors in the security industry run a closed shop. They operate under a sales model that promises a competitive first install, but once you're locked into their proprietary system, you pay heavily to expand and you are often coerced into taking up expensive ongoing maintenance agreements.

Inner Range systems, however, are sold through an independent network of factory trained, certified professionals. Our open technology and distribution agreements mean you're never locked in by one installer.

Our accredited training not only assures your system gets installed correctly, but that you can get competitive quotes for installation, ongoing expansion and maintenance.

If there is no Dealer listed below, find your nearest Accredited Dealer at:
