

Infra-Red Interface

The Infra-red interface connects network controllers ERI-31, ERI-62 or ERI-1RU to third party IR distribution systems

Allows expansion or retrofit to third party infra-red distribution systems

Inject codes to one or many distribution systems

Inject codes direct to 3.5mm phono IR inputs on equipment - avoid use of emitters

Product Highlights

Simple and safe method to interface to third party infra-red distribution networks

Electrically isolates the unit from the third party infra-red distribution networks

Features and Benefits

Cable 3m length with a 3.5mm phono plug at each end
